

Serial No.: 10/717,092
Filing Date: 11/19/2003
Office Action date: 3/23/2006

In the Claims:

Please cancel claims 12-16 without prejudice, the claims are as follows:

1. (Previously Presented) A kennel comprising:

a plurality of side panels configured for coupling to one another; and

a gate panel comprising:

a pair of ends, each of said ends configured for connecting to said side panels

to form an enclosure;

a doorway positioned between said ends and defined by at least one doorway frame member having at least one boss formed therewith;

a door configured for opening and closing said doorway and having at least one door frame member directly and rotatably attached to said boss of said doorway frame member; and

wherein said doorway includes an upper frame member and a lower frame member, both configured for being slidably engaged on said door.

2. (Original) The kennel of claim 1, wherein said door includes a secure fitting directly connecting said door frame member to said doorway frame member.

Serial No.: 10/717,092
Filing Date: 11/19/2003
Office Action date: 3/23/2006

3. (Original) The kennel of claim 2, wherein said secure fitting encircles at least a portion of said doorway frame member to facilitate rotation of said door about a central cylindrical axis defined by said doorway frame member.

4. (Previously Presented) A kennel comprising:
a plurality of side panels configured for coupling to one another; and
a gate panel comprising:
a pair of ends, each of said ends configured for connecting to said side panels to form an enclosure;
a doorway positioned between said ends and defined by at least one doorway frame member having at least one boss formed therewith;
a door configured for opening and closing said doorway and having at least one door frame member directly and rotatably attached to said boss of said doorway frame member;
wherein said door includes a secure fitting directly connecting said door frame member to said doorway frame member; and
wherein said at least one door frame member includes a horizontal member having an end provided with said secure fitting.

Serial No.: 10/717,092
Filing Date: 11/19/2003
Office Action date: 3/23/2006

5. (Previously Presented) A kennel comprising:

- a plurality of side panels configured for coupling to one another; and
- a gate panel comprising:
 - a pair of ends, each of said ends configured for connecting to said side panels to form an enclosure;
 - a doorway positioned between said ends and defined by at least one doorway frame member having at least one boss formed therewith;
 - a door configured for opening and closing said doorway and having at least one door frame member directly and rotatably attached to said boss of said doorway frame member;
 - wherein said door includes a secure fitting directly connecting said door frame member to said doorway frame member; and
 - wherein said secure fitting comprises a sleeve-like member having an inner portion configured for receiving a vertical frame member.

6. (Original) The kennel of claim 1, wherein said at least one door frame member comprises a pair of horizontal members each having a secure fitting configured for receiving said door and rotating between a closed position and an open position.

Serial No.: 10/717,092
Filing Date: 11/19/2003
Office Action date: 3/23/2006

7. (Previously Presented) A kennel comprising:

- a plurality of side panels configured for coupling to one another; and
- a gate panel comprising:
 - a pair of ends, each of said ends configured for connecting to said side panels to form an enclosure;
 - a doorway positioned between said ends and defined by at least one doorway frame member having at least one boss formed therewith;
 - a door configured for opening and closing said doorway and having at least one door frame member directly and rotatably attached to said boss of said doorway frame member;

wherein said doorway comprises:

- a pair of elongated vertical frame members;
- a pair of horizontal frame members connected to said vertical frame members to define a central region; and
- a barrier positioned in said central region and connected to said horizontal and vertical frame members.

8. (Original) The kennel of claim 7, wherein said barrier is wire cloth.

Serial No.: 10/717,092
Filing Date: 11/19/2003
Office Action date: 3/23/2006

9. (Original) The kennel of claim 1, wherein said doorway and said door are integrally formed.

10. (Cancelled)

11. (Previously Presented) A kennel comprising:
a plurality of side panels configured for coupling to one another; and
a gate panel comprising:
a pair of ends, each of said ends configured for connecting to said side panels to form an enclosure;
a doorway positioned between said ends and defined by at least one doorway frame member; and
a door configured for opening and closing said doorway and having at least one door frame member directly and rotatably attached to said doorway frame member,
wherein said doorway includes an upper frame member and a lower frame member both configured for being slidingly engaged on said door, and
wherein said lower and upper frame members each have first and second bosses having inner diameters and configured for engaging a pair of said doorway frame members such that said inner diameters of said first and second bosses of said upper frame

Serial No.: 10/717,092

Office Action date: 3/23/2006

member are greater than said inner diameters of said first and second bosses of said lower frame member.

12. (Cancelled)

13. (Cancelled)

14. (Cancelled)

15. (Cancelled)

16. (Cancelled)

17. (Cancelled)

18. (Previously Presented) The door of claim 19, wherein said first elongated door frame member is configured to rotate about said central cylindrical axis between a closed position and an open position.

Serial No.: 10/717,092
Filing Date: 11/19/2003
Office Action date: 3/23/2006

19. (Previously Presented) A door for a gate panel of a kennel, comprising:

a barrier;

a first elongated door frame member having a central cylindrical axis and connected to said barrier; and

at least two door cross-frame members each connected to first and second barrier securing frame members, and

wherein said first elongated door frame member rotates about said central cylindrical axis,

wherein said barrier comprises:

a wire cloth having at least two ends;

a fastener attached to one of the ends of said wire cloth; and

a plurality of clamps connecting said fastener to said first barrier securing frame member.

20. (Previously Presented) The door of claim 19, wherein said door cross-frame members each include a pair of bosses configured for engaging said first elongated doorway frame member.

21. (Cancelled)
